EASY@BAG TUBE

The EASY@BAG-TUBE® is an automatic bagging machine for bottles / Jerrycans from tubular film roll.

MACHINE CHARACTERISTICS:

- ▶ Anodized aluminum frame structure with adjustable feet. Height adjustment ± 50 mm.
- ▶ Protected by doors with door handles. It allows full vision and access to the machine.
- ▶ Length of hinge tape for container entry 2500 mm
- ▶ It can form PLASTIC BAGS up to:
 - MAXIMUM LENGTH 1280 ml
 - MINIMUM LENGTH Adjustable to work with any length although the customer must inform about the necessary lengths to configure the system accordingly
 - MAXIMUM WIDTH 1050 mm (the height of the bottle determines the maximum width, so the maximum width should be confirmed after checking the maximum sizes of the bottles)
 - MINIMUM WIDTH 750 mm (more width options available on request)

NOTE: small width adjustments to accommodate different bottle sizes are included in the basic system. However, if widths need to be adjusted to accommodate different pallet formats, an extra kit should be budgeted for (for example to adjust a width from 800 mm to 1000 mm)

- ▶ The bottles are fed into the machine by a motorized conveyor (new or existing).
- ▶ The brakes activated by air cylinders allow the incorporation of round bottles (XX or XY indexes are possible).
- ▶ Inlet pusher with adjustable travel and motorized drive system controlled by electronic speed variators. The bottles form a row on the feeding conveyor, the row will be pushed or lifted, and placed on a belt to form the bottle bag.

TECHNICAL DATA

WEIGHT	500 Kg (approx.)
ELECTRICAL CONSUMPTION	380 VAC - 50/60 Hz
POWER	5,0 Kw
DIMENSIONS	See layout
PRESSURE	6 -8 Bar (7 Bar recommended)
PNEUMATIC CONNECTION	\varnothing 10 mm
PRODUCTION	from 400 to 2500 bph
